

Inlet plate with pellet return slots

To avoid pellet accumulations at the strand inlet area

Some cutting processes cause a small amount of pellets to recoil and remain on the strand inlet plate. To prevent accumulations of those pellets, Automatik Plastics Machinery developed a special inlet plate.

Your benefits

- Return of recoiled pellets
- Reduction of angle cuts and long pellets
- Easy installation

Inlet plate with pellet return slots

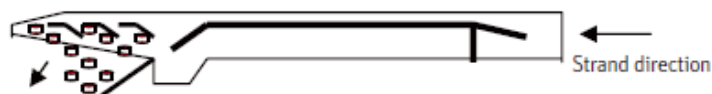

To avoid pellet accumulations at the strand inlet area

Some cutting processes cause a small amount of pellets to recoil and remain on the strand inlet plate. Those accumulations can deflect strands and cause angle cuts and long pellets.

In order to avoid accumulations of pellets at the end of the inlet part, Automatik Plastics Machinery has developed a special inlet plate with pellet return slots for all PRIMO dry cut strand pelletizing systems type S and U.

Advantages

- Return of recoiled pellets prevents strand deflection
- Reduction of angle cuts or long pellets
- Easy installation
- Also available with wear protection
